Appendix 1. Identification of Municipal Water Supplies Listed in Tables 607

1. INTRODUCTION

The report *Uranium in U.S. Surface, Ground, and Domestic Waters* comprises four volumes. Volumes 2, 3, and 4 contain data characterizing the location, sampling date, type, use, and uranium concentrations of 89 994 individual samples presented in tabular form. The tabular data in volumes 2, 3, and 4 are summarized in volume 1 in narrative form and with maps and histograms.

2. URANIUM IN U.S. SURFACE, GROUND, AND DOMESTIC WATERS

2.1 EXPLANATION OF TABLE ENTRIES

Samples are tabulated by state and arranged in order of decreasing uranium content. Samples were chosen to provide representative concentrations of uranium in water for a given geographical location. It should be noted that these values may vary considerably, depending on environmental conditions, such as rainfall or stream flow. When multiple samples were available for the same site, the best quality analytical results (judged by the published quality control program of the analyzing laboratory) were selected. Usually, these data were the most recent available. Replicate analyses were excluded to avoid biasing histograms based on these tabulations.

2.1.1 Sample Site

In most instances each sample site is identified by county name, latitude and longitude, and a unique laboratory identification number. If needed, additional descriptions of the sample sites are available in the bibliographic citation associated with each sample.

2.1.2 Sample Type and Treatment

Data for many types of surface and ground water sources are presented in the tables. Surface water sources include rivers and smaller streams, as well as lakes, reservoirs, and ponds; ground water types include mostly springs and wells. Samples of water from these various sources are usually given some kind of treatment immediately after collection. Usually, samples are filtered to exclude uranium that may be present in suspended solids or sediments, because the concentration of uranium in these solids may be two or three orders of magnitude larger than that dissolved in the water itself. Most investigators also add a small amount of acid to the filtered sample to prevent precipitation of uranium from the sample during storage before analysis. Analyses of unfiltered and unacidified samples may not be comparable to analyses of

samples receiving these treatments. For this reason each tabulated sample has been coded for sample type and sample treatment, and this information should be weighed when samples containing abnormal concentrations of uranium are considered. These two-digit codes are located in the 6th column of the tables. The codes are defined as follows:

Code	Description
01	Untreated spring water
02	Untreated river or stream water
03	Untreated well water
04	Untreated lake or reservoir water
06	Spring water filtered through a 0.45-μm membrane filter and acidified to a pH of ≤1 with high purity nitric acid
07	River or stream water filtered through a 0.45-μm membrane filter and acidified to a pH of ≤1 with high purity nitric acid
08	Well water filtered through a 0.45-μm membrane filter and acidified to a pH of ≤1 with high purity nitric acid
09	Lake or reservoir water filtered through a 0.45-μm membrane filter and acidified to a pH of ≤1 with high purity nitric acid
21	Spring water filtered through a 0.45-μm membrane filter
22	River or stream water filtered through a 0.45-μm membrane filter
23	Well water filtered through a 0.45-μm membrane filter
24	Lake or reservoir water filtered through a 0.45-μm membrane filter
30	Finished product from a water treatment plant fed by surface water
31	Finished product from a water treatment plant fed by ground water
32	Finished product from a water treatment plant fed by surface and ground water
40	Spring water acidified only
41	River or stream water acidified only

42	Well water acidified only
43	Lake or reservoir water acidified only
44	Mine water acidified only
45	Surface water, unknown treatment
46	Ground water, unknown treatment
47	Mine effluent
51	Stream water filtered through a ≤0.8-μm membrane
52	Well water filtered through a ≤0.8-μm membrane
53	Spring water filtered through a ≤0.8-μm membrane
54	Lake water filtered through a ≤0.8-μm membrane

2.1.3 Use Data

Frequently the sampler indicated the intended use of the sample source. If the site was identified as, or could be presumed to be, a domestic water source, the sample was coded with the number "2" in the "Use" column of each table. If the intended use was not specified, or could not be presumed to be for human consumption, the sample was coded with the number "1" in the "Use" column of each of these tables.

2.1.4 Sample Date

The date on which each sample was collected is given in column 9 by a six-digit code representing the month, day, and year of collection.

2.1.5 Municipal Supply Number

The 8th column of each table, labeled "Municipal Supply Number," contains reference numbers that identify individual municipal water treatment plants from which treated water samples were taken. The names and locations of these plants are given in the appendix of this volume. The figures following the plant name indicate the percentage of the total supply of treated water each plant provided at the time of sampling.

2.1.6 Sample Contamination

In many instances the sample collector indicated possible types of sample contamination. These judgments are indicated by the following one-digit code entered in column 9 of each table:

Code	Possible contamination
1	None
2	Mining
3	Agriculture
4	Industrial
5	Sewage
6	Power generation
7	Urban
8	Recreation
9	Other

2.1.7 Uranium Concentration

All NURE and almost all non-NURE analyses were reported directly in parts per billion of uranium by weight. Non-NURE samples in which uranium was initially determined in micrograms per liter or picocuries per liter are designated by sample identification numbers beginning with the letter X or Y, respectively. These values were entered in column 11 of each table. Usually, no measurements were available of the radioactivity of the water sample. When measured values were unavailable, estimates of the alpha activity of the sample were computed using the relationship, 1 ppb of uranium equals 0.68 pCi/L, assuming equilibrium concentrations of ^{238}U, ^{235}U, and ^{234}U. These computed values were entered in column 12 of each table. An analogous procedure was used if uranium concentrations were reported in picocuries per liter rather than in parts per billion. The validity of these converted values depends on the presumption of radioactive equilibrium among the uranium isotopes. It is well known that the uranium isotopes in some samples are not in radioactive equilibrium [4]. Usually, information concerning the

radioactive equilibrium of the samples was not available; consequently, the converted values, usually the radioactivity estimate, are less firm than the analytically determined values.

2.1.8 Estimated Lifetime Bone Dose

Two separate estimates (mrem/year) of the lifetime bone dose of alpha radiation due to uranium in drinking water were entered in columns 13 and 14 of the tables. The first estimate (Model I) was based on an exposure-dose relationship supplied by personnel from the Office of Drinking Water (ODW), U.S. Environmental Protection Agency (EPA). This formula equated a 70-year, 2-liter-per-day consumption of water containing 10 pCi/L uranium with a 150 mrem/year bone dose of alpha radiation, assuming a normal distribution of isotopic species.

The second estimate, Model II, of the lifetime bone dose of alpha radiation due to uranium in drinking water was based on the relationship that a 50-year daily ingestion of 2 liters of water containing 1 pCi/L of ^{238}U plus its daughters would result in a bone dose of 0.56 mrem/year [194]. Estimates of bone dose based on Model II are smaller than those computed for Model I by a factor of 25. An assessment of the validity of the models used is beyond the scope of this report; however, some discussion of the assumptions entering into Model II may be found in the cited reference.

2.1.9 References

The number in the last column of each table refers to a bibliographic citation in Sect. 4, volume 1, bearing the same identifying number.

APPENDIX 1

IDENTIFICATION OF MUNICIPAL WATER SUPPLIES LISTED IN TABLES

Supply number	Water treatment plant name	Fraction of total demand by water supply (%)
1	Putnam station	10
2	Shades Mountain	90
3	Mobile	100
4	Court Street	39
5	Day Street	61
6	Verde River	12
7	Squaw Peak	30
8	Verde well field	17
9	Scottsdale Well No. 36	15
10	South-side wells	33
11	North-side wells	33
12	Upper Santa Cruz wells	33
13	Composite of wells No. 3, No. 27, and No. 31	100
14	Long Beach	60
15	La Verne	40
16	San Fernando Reservoir	60
17	Orinda	99
18	Sacramento filter plant	85
19	Alvarado	47
20	Crystal Springs Reservoir	8
21	San Andreas Reservoir	2
22	Composite of 119 wells	80
23	Moffat	46
24	Marston Lake North-side	31
25	Kassler	15
26	Easton	21
27	Hemlocks	51
28	Trap Falls	26
29	West Hartford	97
30	Whitney	13
31	Lake Gaillard	41
32	McMillan	55
33	Well No. 7	100
34	Hialeah	40
35	Orr	60
36	Cosme	100
37	Tampa water works	97
38	Hemphill	100
39	Cherokee Hill	100
40	Kaimuki	13
41	Beretania pumping station	23
42	Kahili underground station	21
43	Chicago Avenue station	46
44	Lake View station	20
45	South District station	34
46	Composite of six group wells	8
47	Filtration plant	100
48	Three Rivers filtration plant	100
49	Gray-Hobart filtration plant	100
50	Fall Creek	45
51	White River plant	55
52	Coquillard Well No. 3	18
53	Pinhook station, Well No. 3	18
54	North station, Wells No. 5 and No. 7	18

4 TITLE AND SUBTITLE: Uranium in U.S. Surface, Ground, and Domestic Waters, Volume 3	5 REPORT DATE: April 1981
	6 PERFORMING ORGANIZATION CODE
7 AUTHOR(S): J. S. Drury, S. Reynolds, P. T. Owen, R. H. Ross, and J. T. Ensminger	8 PERFORMING ORGANIZATION REPORT NO. ORNL/EIS-192/V3
9 PERFORMING ORGANIZATION NAME AND ADDRESS: Information Center Complex, Information Division, Oak Ridge National Laboratory, Oak Ridge, Tennessee 37830	10 PROGRAM ELEMENT NO.
	11 CONTRACT/GRANT NO.
12 SPONSORING AGENCY NAME AND ADDRESS: Office of Drinking Water, U.S. Environmental Protection Agency, Washington, D.C. 20460	13 TYPE OF REPORT AND PERIOD COVERED
	14 SPONSORING AGENCY CODE

15 SUPPLEMENTARY NOTES

16 ABSTRACT

This report summarizes published information concerning the concentrations of uranium in 89 994 U.S. surface, ground, and domestic waters. Sources surveyed included the open literature, state health departments, federal agencies, and personal contacts. For each state, samples were geographically located, identified by type and use, and tabulated by decreasing uranium concentration. Histograms covering 14 concentration ranges were prepared for all surface, ground, and domestic water samples of each state and for the entire United States. Estimates were made of the population-weighted average concentrations of uranium in domestic waters of each state. Based on these averages, alpha radiation bone doses were computed for lifetime consumptions of each water. In addition, the fractions of water supplies in each state producing water containing uranium in excess of 1, 5, 10, and 20 pCi/L were estimated. An extensive discussion of analytical methods used to determine uranium in surface and ground waters was also included.

The concentrations of uranium in 34 561 U.S. surface waters ranged from 0.01 to 582.38 pCi/L and averaged 1.06 pCi/L. In 55 433 U.S. ground water samples the concentrations of uranium ranged from 0.01 to 652.80 pCi/L and averaged 3.18 pCi/L. Uranium in 28 239 domestic water sources ranged from 0.07 to 652.80 pCi/L and averaged 1.73 pCi/L. The population-weighted average concentration of uranium in U.S. domestic waters was estimated to be 0.8 pCi/L.
